

Re-flow Roundup 2018

10 superb additions to the Re-flow solution over the last year

1 | Map scheduling

View all work on a map to quickly and easily schedule jobs, reducing operative travel time and enabling more jobs with efficient routing.

2 | Image instructions

Forms can now include pictures and diagrams, as well as words, which significantly improves understanding of jobs, especially when literacy or languages are a factor.

3 | Log user documents, training and certifications

In the dashboard each user profile can include a much more detailed breakdown of their skills, training, a copy of their CSCS card (or other ID), certification and other documentation!

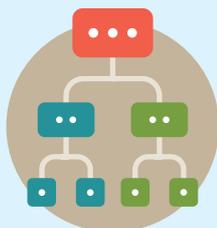

4 | Fine-tuned personnel filters

If you want to quickly select operatives based on skills, roles, gangs or as individuals, you can auto-sort with the new filter system, grab the right gang and get going!

5 | Intuitive question trees

When a user is required to input information or data on site, Re-flow has introduced intuitive question trees that only ask for relevant information based on the previous response, removing user guess work and unnecessary data input.

6 | Point of work risk assessment

Our new risk assessment scoring formulas change colour depending on the likelihood and severity of risk at the point of use, to show what is an acceptable way of working.

7 | Powerful scheduler

Flexibility to assign jobs to any combination of groups or individuals across multiple dates. With the scheduler, you can use the drag and drop functionality to easily group or split your staff and jobs across the calendar.

8 | Adaptable job lists

When you set up a job, you can assign new or pre-set task lists. We can also set up ordered task lists – where workers, on site, must complete each task one at a time, before being able to move to the next. A task always includes a tick and a comments box, but can also include the requirement to complete and sign a form and /or read a statement or document.

9 | Job and event filtering

Now within job lists and events, we also have the ability to filter in a whole variety of ways in the dashboard, for example date, location, customer and many more.

10 | Satisfaction emojis

When quick feedback is required, Re-flow now contains satisfaction emojis, which enable a much quicker, quantifiable way to evaluate the sentiment operatives have towards a job, process or task.
