INTRODUCTION

Established in 1952, Wilson and Scott are a national line marking company for Roads, Highways and Car Parks including Anti-skid Surfacing and bespoke Decorative Markings for Public Car Parks, Supermarkets, Stadiums, Playgrounds and any Business or Retail environments.

Our contracts range from small scale car parks with a few spaces up to large industrial sites and car parks with many thousands of bays and include lettering, arrows, symbols and any type of coloured marking or graphics to match corporate logos and themed colour schemes.

We have a fleet of over 30 trucks and teams operating from nationwide depots located throughout the UK. Fully trained and experienced staff can assist you with the best choice of materials and the layout of your site for optimum usage. We operate a 24/7 business and can be on your site in an hour or less. Working in partnership with you and your staff, we will programme the work to suit your operational needs with staff on call for emergency or programmed work at night and at the weekend if necessary.

Whatever your requirement, Wilson and Scott are best placed to help you achieve your exact needs and be on hand to advise on the best materials to use and deliver work to the highest of standards.

CAR PARK MARKING

High quality, durable line painting for car parks

Owners and operators of car parks or private road networks want to know that the contractor they appoint to mark or remark their parking bays and other lines is going to offer them the best possible solution for their site as well as advising on layout options to suit safety criteria.

Wilson and Scott applies over 20 million metres of line painting per year throughout the UK, owning and operating a large fleet of multi-purpose lorries, spray, extrusion, raised rib and paint applicators as well as a comprehensive range of performance test equipment.

As a major contractor for both Surface Markings and Anti Skid Surfaces, Wilson and Scott are ideally qualified to support the new build or refurbishment of all types of car parks, footpaths, playgrounds, industrial estates, business parks, distribution centres and airfields.

CAR PARK MATERIALS

The right material for the right job – giving you peace of mind

Whilst some line marking contractors may offer only one or two choices of material Wilson and Scott offer a full range of products and will discuss with you the merits of each one depending on the site to be marked. Some products are better than others for concrete surfaces and some are not suitable for multi-storey or underground use. Choose the right one and you will enjoy many years of use before the lines need marking again. The wrong choice, however, might result in early failure and a constant battle to keep the markings looking good.

Widest choice of materials available

The materials in common use for road and car park markings fall into some distinct categories and we can offer a variety of grades within each category. The material used for almost all public road lining work and a large percentage of car parks is Hot Thermoplastic which is a hard wearing, quick drying material available in a few colours and quality grades. It is not suitable for all surfaces however and if laid on the wrong surface it will quickly break off.

Materials & Services Supplied

- High Traction, Safe Surfaces
- Oil, Fuel and Water Resistant
- Easy Maintenance
- Wide Range of Materials and Colours
- Thermoplastics
- Epoxy
- Methylmethacrylate Marking
- Abrasive Resistant Aggregates
- NiteSite – Wet Night High Visiblity Marking
- Raised Rib Marking
- Line Removal
- Preformed Marking
- Cats Eyes

ANTI SKID AND SAFETY SURFACING

For Vehicle and Pedestrian safety when surfaces are wet or dry.

Wilson and Scott have Anti Skid and Safety Surface solutions for every car park, road or street environment. Applied by highly trained and experienced Anti Skid teams, in a majority of situations, we will have the surface and surroundings fully operational and clean within a few hours, resulting in minimal or nil impact to your normal operations.

Bimagrip Polyurethane

This advanced thermosetting resin enables customised solutions to safety and performance problems of most types of vehicle and pedestrian areas including asphalt, concrete, timber and steel. Treated surfaces are able to be fully operational within a couple of hours, thus ensuring minimal disruption to your customers' activities.

BBA Hapas Type 1 Cold Applied

For heavy traffic and long life, this is the ultimate material for the job. Strong, flexible and durable, it provides a safe Anti Skid surface to enable smooth and rapid movement of vehicles and pedestrians in wet or dry conditions.

BBA Hapas Type 1 Hot Applied

This is a superior product in the hot Anti Skid range with widespread use in heavy traffic and hazard zones including approaches to pedestrian areas and areas with multi-directional traffic. This material has the added benefit of being applied all year round.

BBA Hapas Type 1 MMA High Friction Coloured Surfacing

A high performance, high friction surface finish, available in a range of colours and skid resistances. It achieves a 'zero erosion index' providing the highest possible rating for wear resistance. Winter grade enables all-year-round application.

CASE STUDY

Dr Phil Bassill, Director of Resources, The Harefield Academy

"Following an assessment of our Academy car parking area by the local fire brigade, it was deemed crucial that we mark off certain areas for health and safety reasons.

We chose Wilson and Scott because of their proven experience in performing this type of work. It was very important for us that they carry out this project at short notice when the students and staff were on half term and Wilson and Scott fitted into our schedule perfectly.

Wilson and Scott proved very flexible in their approach to our requirements and were very helpful in recommending the right materials for the job.

I thoroughly recommend them to carry out this type of work."

CASE STUDY

Roger Vogel, Duty Manager, Nuffield Health and Fitness Club

"Our Car Park markings were in need of urgent renewal as the previous lines had deteriorated. I asked Wilson and Scott to quote on renewing all parking bay lines, directional arrows, give way markings and yellow lines where appropriate.

My top priorities were to have this work done on budget and to keep the area open at all times so that we didn't disrupt or inconvenience our own customers – Wilson and Scott fulfilled both criteria.

Wilson and Scott were able to renew all the markings in our car park with minimal disruption to our normal working hours and now our Car Park looks fantastic."

CASE STUDY

Chris Hopkirk, Sales Director, ASG Services

"ASG Services have worked with Wilson & Scott for a number of years and I've found them to offer excellent value for money. They always fulfil their promises by delivering their services on time by skilled personnel.

As important, and unlike other companies, they also provide good advice as to the correct solution working closely with the customer to ensure they understand what they are being supplied.

I have no hesitation in recommending Wilson and Scott."

Health and Safety

Wilson and Scott is committed to providing a safe and healthy working environment for its employees and for those members of the public and visitors who come into contact with our working environment.

Environment

The significant achievement of gaining internationally recognised ISO 14001 certification has given credibility to our positive and ongoing commitment to securing environmental improvements. We recognise that our activities interact with the environment and are committed to minimising adverse impacts and maximising positive impacts.
